1 Introduction

Note: This specification has been deprecated in favor of Entity Time (XEP-0202).
This document provides canonical documentation of the 'jabber:iq:time' namespace, which
was long used by Jabber applications to discover the time at another entity's location. This
document is of historical importance only, since it has been deprecated in favor of XEP-0202.

2 Definition

The 'jabber:iq:time' namespace provides a standard way for Jabber entities to exchange
information about the local time (e.g., to "ping" another entity or check network latency).
The information is communicated in a request/response pair using an <iq/> element that
contains a <query/> scoped by the 'jabber:iq:time' namespace. The following children of the
<query/> element are allowed in an IQ result:

- <utc/> -- The time (in UTC) according to the responding entity. The format SHOULD be
  "CCYYMMDDThh:mm:ss" (see below). This element is REQUIRED in an IQ result.
- <tz/> -- The time zone in which the responding entity is located. This can be either a
  three-letter acronym or the full natural-language name of the timezone. This element
  is OPTIONAL in an IQ result.
- <display/> -- The time in a human-readable format. This element is OPTIONAL in an IQ
  result.

3 Examples

Listing 1: Querying Another Entity for the Time

```xml
<iq type='get'
   from='romeo@montague.net/orchard'
   to='juliet@capulet.com/balcony'
   id='time_1'>
   <query xmlns='jabber:iq:time'/>
</iq>
```

Listing 2: A Response to the Query

```xml
<iq type='result'
   from='juliet@capulet.com/balcony'
   to='romeo@montague.net/orchard'
   id='time_1'>
   <query xmlns='jabber:iq:time'/>
</iq>
```

2A list of time zone names and abbreviations is located at <http://www.timeanddate.com/library/abbreviations/timezones/>.
The standard error conditions described in Error Condition Mappings (XEP-0086) apply (e.g., service unavailable if the entity does not support the namespace).

4 A Note on Time Formats

XMPP Date and Time Profiles (XEP-0082) defines the lexical representation of dates, times, and datetimes in Jabber protocols. Unfortunately, the 'jabber:iq:time' namespace predates that definition, and uses a datetime format (“CCYYMMDDThh:mm:ss”) that is inconsistent with XEP-0082 and XML Schema Part 2. Because a large base of deployed software uses the old format, this document specifies that applications using 'jabber:iq:time' SHOULD use the old format, not the format defined in XEP-0082. In addition, note well that the datetime provided in the <utc/> element is explicitly UTC and therefore SHOULD NOT include the ending 'Z' character required by ISO 8601.

5 Security Considerations

There are no security features or concerns related to this document.

6 IANA Considerations

This document requires no interaction with the Internet Assigned Numbers Authority (IANA).

---

4ISO 8601: Representation of Dates and Times (2000). This specification is not freely available; however, a good summary is located at <http://www.cl.cam.ac.uk/~mgk25/iso-time.html>.
5The Internet Assigned Numbers Authority (IANA) is the central coordinator for the assignment of unique parameter values for Internet protocols, such as port numbers and URI schemes. For further information, see <http://www.iana.org/>.
7 XMPP Registrar Considerations

The 'jabber:iq:time' namespace is registered in the protocol namespaces registry maintained by the XMPP Registrar.

8 XML Schema

```xml
<?xml version='1.0' encoding='UTF-8'?>
<xs:schema
    xmlns:xs='http://www.w3.org/2001/XMLSchema'
    targetNamespace='jabber:iq:time'
    xmlns='jabber:iq:time'
    elementFormDefault='qualified'>
    <xs:annotation>
        <xs:documentation>
            The protocol documented by this schema is defined in XEP-0090: http://www.xmpp.org/extensions/xep-0090.html
            NOTE: This protocol has been deprecated in favor of the Entity Time protocol specified in XEP-0202: http://www.xmpp.org/extensions/xep-0202.html
        </xs:documentation>
    </xs:annotation>
    <xs:element name='query'>
        <xs:complexType>
            <xs:sequence minOccurs='0'>
                <xs:element name='utc' type='xs:string' minOccurs='1'/>
                <xs:element name='tz' type='xs:string' minOccurs='0'/>
                <xs:element name='display' type='xs:string' minOccurs='0'/>
            </xs:sequence>
        </xs:complexType>
    </xs:element>
</xs:schema>
```

---

*The XMPP Registrar maintains a list of reserved protocol namespaces as well as registries of parameters used in the context of XMPP extension protocols approved by the XMPP Standards Foundation. For further information, see <https://xmpp.org/registrar/>.*
