This document defines a recommended suite of Jabber/XMPP protocols to be supported by intermediate instant messaging and presence applications. Note: This protocol suite has been obsoleted by XEP-0213 and XEP-0216.
Legal

Copyright

This XMPP Extension Protocol is copyright © 1999 – 2020 by the XMPP Standards Foundation (XSF).

Permissions

Permission is hereby granted, free of charge, to any person obtaining a copy of this specification (the "Specification"), to make use of the Specification without restriction, including without limitation the rights to implement the Specification in a software program, deploy the Specification in a network service, and copy, modify, merge, publish, translate, distribute, sublicense, or sell copies of the Specification, and to permit persons to whom the Specification is furnished to do so, subject to the condition that the foregoing copyright notice and this permission notice shall be included in all copies or substantial portions of the Specification. Unless separate permission is granted, modified works that are redistributed shall not contain misleading information regarding the authors, title, number, or publisher of the Specification, and shall not claim endorsement of the modified works by the authors, any organization or project to which the authors belong, or the XMPP Standards Foundation.

Warranty

## NOTE WELL: This Specification is provided on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. ##

Liability

In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall the XMPP Standards Foundation or any author of this Specification be liable for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising from, out of, or in connection with the Specification or the implementation, deployment, or other use of the Specification (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if the XMPP Standards Foundation or such author has been advised of the possibility of such damages.

Conformance

This XMPP Extension Protocol has been contributed in full conformance with the XSF’s Intellectual Property Rights Policy (a copy of which can be found at https://xmpp.org/about/xsf/ipr-policy or obtained by writing to XMPP Standards Foundation, P.O. Box 787, Parker, CO 80134 USA).

3  Definition  
4  Security Considerations  
5  IANA Considerations  
6  XMPP Registrar Considerations
1 Introduction

Note: This protocol suite is obsolete. For updated protocol suites, refer to XMPP Intermediate IM Client 2008 (XEP-0213)\(^1\) and XMPP Intermediate IM Server 2008 (XEP-0216)\(^2\).

The Basic IM Protocol Suite (XEP-0073)\(^3\) introduced the concept of a "protocol suite". This document extends the basic support specified in XEP-0073 by specifying an Intermediate IM Protocol Suite.

2 Requirements and Approach

This document follows the same approach as XEP-0073. By design, the Basic IM Protocol Suite does not include more advanced instant messaging functionality; the present document fills the need for a protocol suite that addresses such functionality.

A protocol is deemed worthy of inclusion in this protocol suite if:

- It addresses common needs of instant messaging users that are addressed by virtually all other popular IM services or systems.
- It is more advanced than basic IM and presence.
- It has achieved a status of at least Draft within the XMPP Standards Foundation’s standards process (as defined in XMPP Extension Protocols (XEP-0001)\(^4\)).

3 Definition

We define the Intermediate IM Protocol Suite as follows:

<table>
<thead>
<tr>
<th>Specification</th>
<th>Requirement Level</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>XEP-0073: Basic IM Protocol Suite</td>
<td>Required</td>
<td></td>
</tr>
<tr>
<td>Multi-User Chat (XEP-0045)</td>
<td>Required</td>
<td></td>
</tr>
<tr>
<td>XHTML-IM (XEP-0071)</td>
<td>Required</td>
<td></td>
</tr>
<tr>
<td>SI File Transfer (XEP-0096)</td>
<td>Required</td>
<td></td>
</tr>
<tr>
<td>Entity Capabilities (XEP-0115)</td>
<td>Required</td>
<td></td>
</tr>
</tbody>
</table>

Note well that the foregoing protocols apply to clients only (i.e., they do not introduce new requirements for servers). In addition, these protocols have their own dependencies, which include the following XEPs (as well as various IETF RFCs and W3C specifications):

- Data Forms (XEP-0004)  
- Feature Negotiation (XEP-0020)  
- In-Band Bytestreams (XEP-0047)  
- SOCKS5 Bytestreams (XEP-0065)  
- Field Standardization for Data Forms (XEP-0068)  
- XMPP Date and Time Profiles (XEP-0082)  
- Stream Initiation (XEP-0095)  

In addition, because the intermediate suite builds on the basic suite, by definition all protocols required by XEP-0073 are also required by the intermediate suite (refer to XEP-0073 for details).

4 Security Considerations

This document introduces no additional security considerations above and beyond those defined in the documents on which it depends.

5 IANA Considerations

This document requires no interaction with the Internet Assigned Numbers Authority (IANA).

---

12The Internet Assigned Numbers Authority (IANA) is the central coordinator for the assignment of unique parameter values for Internet protocols, such as port numbers and URI schemes. For further information, see <http://www.iana.org/>.
6 XMPP Registrar Considerations

No namespaces or parameters need to be registered with the XMPP Registrar as a result of this document.

---

The XMPP Registrar maintains a list of reserved protocol namespaces as well as registries of parameters used in the context of XMPP extension protocols approved by the XMPP Standards Foundation. For further information, see <https://xmpp.org/registrar/>.
