2015-08-11

Version 1.0

Status	Type	Short Name
Draft	Standards Track	NOT_YET_ASSIGNED

This specification defines an XMPP extension to negotiate the use of the use of RTP Header Extension as defined by RFC 5285 with Jingle RTP sessions

Legal

Copyright

This XMPP Extension Protocol is copyright © 1999 – 2017 by the [XMPP Standards Foundation](#) (XSF).

Permissions

Permission is hereby granted, free of charge, to any person obtaining a copy of this specification (the "Specification"), to make use of the Specification without restriction, including without limitation the rights to implement the Specification in a software program, deploy the Specification in a network service, and copy, modify, merge, publish, translate, distribute, sublicense, or sell copies of the Specification, and to permit persons to whom the Specification is furnished to do so, subject to the condition that the foregoing copyright notice and this permission notice shall be included in all copies or substantial portions of the Specification. Unless separate permission is granted, modified works that are redistributed shall not contain misleading information regarding the authors, title, number, or publisher of the Specification, and shall not claim endorsement of the modified works by the authors, any organization or project to which the authors belong, or the XMPP Standards Foundation.

Warranty

NOTE WELL: This Specification is provided on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE.

Liability

In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall the XMPP Standards Foundation or any author of this Specification be liable for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising from, out of, or in connection with the Specification or the implementation, deployment, or other use of the Specification (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if the XMPP Standards Foundation or such author has been advised of the possibility of such damages.

Conformance

This XMPP Extension Protocol has been contributed in full conformance with the XSF's Intellectual Property Rights Policy (a copy of which can be found at <https://xmpp.org/about/xsf/ipr-policy>) or obtained by writing to XMPP Standards Foundation, P.O. Box 787, Parker, CO 80134 USA).

1 Introduction

This document specifies how to negotiate the use of the RTP Header Extensions as defined by [RFC 5285](#)¹ with Jingle RTP sessions.

2 Requirements

The Jingle extension defined herein is designed to meet the following requirements:

1. Enable negotiations of the RTP Header extensions as defined in RFC 5285.
2. Map these parameters to Session Description Protocol (SDP; see [RFC 4566](#)²) to enable interoperability.

3 New element

This specification defines a new element, `<rtp-hdext/>`, that can be inserted in the `<description/>` element of a XEP-0167 RTP session.

The attributes of the `<rtp-hdext/>` element are:

Attribute	Description	Inclusion	Possible values
id	The ID of the extensions	REQUIRED	1-256, 4096-4351
uri	The URI that defines the extension	REQUIRED	Any valid URI
senders	Which party is allowed to send the negotiated RTP Header Extensions	OPTIONAL (defaults to "both")	"initiator", "responder", and "both"

Any type of RTP Header Extension that requires extra parameters in the a=b form can embed `<parameter/>` elements to describe it. Any other form of parameter can be stored as the 'key' attribute in a parameter element with an empty value.

4 Negotiation

RTP header extensions are negotiated along the codecs. They follow the same Offer/Answer mechanism based on SDP Offer/Answer. The initiator signals which RTP header extensions

¹RFC 5285: A General Mechanism for RTP Header Extensions <http://tools.ietf.org/html/rfc5285>.

²RFC 4566: SDP: Session Description Protocol <http://tools.ietf.org/html/rfc4566>.

it wants to send or receive in the the <session-initiate/> iq stanza. If the responder does not understand the type of header extensions, it MUST remove the element from the reply. If the responder does not wish to provide or receive some kind of RTP header extension, it MUST remove the relevant element from the reply. It MUST then send the remaining elements it wants to keep as-is without modifying them in the <session-accept/> iq stanza.

It MUST NOT add any <rtp-hdrex/> element that was not offered by the initiator. The responder MAY downgrade the senders field from "both" to "initiator" or "responder", but MUST NOT modify it if it is "initiator" or "responder".

Example negotiation where the initiator offers to use the timestamp offset header extension as defined in RFC 5450³ and also the requests synchronisation metadata header extension (RFC 6051⁴) with either the 56-bit or the 64-bit format.

Listing 1: Initiator sends description inside session-initiate

```
<description xmlns='urn:xmpp:jingle:apps:rtp:1' media='video'>
  <rtp-hdrex xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrex:0'
    uri='urn:ietf:params:rtp-hdrex:toffset'
    id='1' />
  <rtp-hdrex xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrex:0'
    uri='urn:ietf:params:rtp-hdrex:ntp-64'
    id='4907' />
  <rtp-hdrex xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrex:0'
    uri='urn:ietf:params:rtp-hdrex:ntp-56'
    id='4907' />
  <payload-type id='96' name='THEORA' clockrate='90000' />
</description>
```

Example reply where the responder accepts the timestamp offset and the 56-bit synchronisation metadata header extensions.

Listing 2: Reponder sends description inside session-accept

```
<description xmlns='urn:xmpp:jingle:apps:rtp:1' media='video'>
  <rtp-hdrex xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrex:0'
    uri='urn:ietf:params:rtp-hdrex:toffset'
    id='1' />
  <rtp-hdrex xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrex:0'
    uri='urn:ietf:params:rtp-hdrex:ntp-56'
    id='2' />
  <payload-type id='96' name='THEORA' clockrate='90000' />
</description>
```

Another reply to the same request where the responder accepts only the synchronisation data header extension with the 64-bit format.

³RFC 5450: Transmission Time Offsets in RTP Streams <<http://tools.ietf.org/html/rfc5450>>.

⁴RFC 6051: Rapid Synchronisation of RTP Flows <<http://tools.ietf.org/html/rfc6051>>.

Listing 3: Responder sends description inside session-accept with only the synchronisation data accepted

```
<description xmlns='urn:xmpp:jingle:apps:rtp:1' media='video'>
  <rtp-hdrextn xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrextn:0'
    uri='urn:ietf:params:rtp-hdrextn:ntp-64'
    id='2' />
  <payload-type id='96' name='THEORA' clockrate='90000' />
</description>
```

5 Mapping to Session Description Protocol

The <rtp-hdrextn/> element maps to the "a:extmap=" SDP line defined in RFC 5285. The ID is mapped to the 'id' attribute, the direction to the 'senders' attribute and the URI to the 'uri' attribute.

Example conversion of an incomplete sample fragment of a SDP taken from RFC 5285 section 6 into equivalent XMPP:

Listing 4: SDP fragment

```
m=video
a=sendrecv
a=extmap:1 URI-toffset
a=extmap:2/recvonly URI-gps-string
a=extmap:3 URI-frametype
```

Listing 5: The same description in XMPP format

```
<description xmlns='urn:xmpp:jingle:apps:rtp:1' media='video'>
  <rtp-hdrextn xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrextn:0'
    id='1'
    uri='URI-toffset' />
  <rtp-hdrextn xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrextn:0'
    id='2'
    uri='URI-gps-string'
    senders='initiator' />
  <rtp-hdrextn xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdrextn:0'
    id='3'
    uri='URI-frametype' />
</description>
```

6 Determining support

To advertise its support for Generic Header extensions in Jingle RTP Sessions, when replying to [Service Discovery \(XEP-0030\)](#)⁵ information requests an entity MUST return the following

⁵XEP-0030: Service Discovery <<https://xmpp.org/extensions/xep-0030.html>>.

features:

1. URNs for any version of this protocol that the entity supports -- e.g., "urn:xmpp:jingle:apps:rtp:rtp-hdext:0" for the current version

An example follows:

Listing 6: Service discovery information request

```
<iq from='romeo@montague.lit/orchard'
  id='bh3vd715'
  to='juliet@capulet.lit/balcony'
  type='get'>
  <query xmlns='http://jabber.org/protocol/disco#info' />
</iq>
```

Listing 7: Service discovery information response

```
<iq from='juliet@capulet.lit/balcony'
  id='bh3vd715'
  to='romeo@montague.lit/orchard'
  type='result'>
  <query xmlns='http://jabber.org/protocol/disco#info'>
    <feature var='urn:xmpp:jingle:1' />
    <feature var='urn:xmpp:jingle:apps:rtp:1' />
    <feature var='urn:xmpp:jingle:apps:rtp:video' />
    <feature var='urn:xmpp:jingle:apps:rtp:rtp-hdext:0' />
  </query>
</iq>
```

7 IANA Considerations

This document requires no interaction with the Internet Assigned Numbers Authority (IANA).

8 XMPP Registrar Considerations

8.1 Protocol Namespaces

This specification defines the following XML namespaces:

- urn:xmpp:jingle:apps:rtp:rtp-hdext:0

The XMPP Registrar ⁶ includes the foregoing namespaces in its registry at <https://xmpp.org/registrar/namespaces.html>, as governed by XMPP Registrar Function (XEP-0053) ⁷.

8.2 Namespace Versioning

If the protocol defined in this specification undergoes a revision that is not fully backwards-compatible with an older version, the XMPP Registrar shall increment the protocol version number found at the end of the XML namespaces defined herein, as described in Section 4 of XEP-0053.

9 XML Schemas

```
<?xml version='1.0' encoding='UTF-8'?>
<xs:schema
  xmlns:xs='http://www.w3.org/2001/XMLSchema'
  targetNamespace='urn:xmpp:jingle:apps:rtp:rtp-hdext:0'
  xmlns='urn:xmpp:jingle:apps:rtp:rtp-hdext:0'
  elementFormDefault='qualified'>

  <xs:annotation>
    <xs:documentation>
      The protocol documented by this schema is defined in
      XEP-0294: http://www.xmpp.org/extensions/xep-0294.html
    </xs:documentation>
  </xs:annotation>

  <xs:element name='rtp-hdext'>
    <xs:complexType>
      <xs:sequence>
        <xs:element name='parameter'
          type='parameterElementType'
          minOccurs='0'
          maxOccurs='unbounded' />
      </xs:sequence>
      <xs:attribute name='id' type='xs:unsignedInt' use='required' />
      <xs:attribute name='uri' type='xs:string' use='required' />
      <xs:attribute name='senders'
        use='optional' />
    </xs:complexType>
  </xs:element>
</xs:schema>
```

⁶The XMPP Registrar maintains a list of reserved protocol namespaces as well as registries of parameters used in the context of XMPP extension protocols approved by the XMPP Standards Foundation. For further information, see <https://xmpp.org/registrar/>.

⁷XEP-0053: XMPP Registrar Function <https://xmpp.org/extensions/xep-0053.html>.

```
        default='both'>
    <xs:simpleType>
      <xs:restriction base='xs:NCName'>
        <xs:enumeration value='both' />
        <xs:enumeration value='initiator' />
        <xs:enumeration value='none' />
        <xs:enumeration value='responder' />
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>
</xs:complexType>
</xs:element>

<xs:complexType name='parameterElementType'>
  <xs:simpleContent>
    <xs:extension base='empty'>
      <xs:attribute name='name' type='xs:string' use='required' />
      <xs:attribute name='value' type='xs:string' use='optional' />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>

</xs:schema>
```
