Google Summer of Code 2023

Are you a student or newcomer to open-source programming? Can you imagine working part time (or even full-time) on an open-source software project in this summer?

Then consider joining an XMPP real-time communication project and participate in the Google Summer of Code 2023!

XMPP is the Extensible Messaging and Presence Protocol that is running in professional software and open-source projects around the world. From communication applications, performative server technology or internet of things XMPP is an IETF standardized protocol with more than 20 years of proven experience. A decentralized and inter-operable technology to establish small and flexible solutions up to full-scale professional applications. Join with your innovations!
XMPP.org

The Google Summer of Code is an international annual program in which Google awards stipends to contributors who successfully complete a free and open-source software coding project during the summer. Project ideas are listed by host organizations involved in open-source software development, though students can also propose their own project ideas.
